# Contents

- The past: LibreOffice for Android experiments
- The present: complement for LibreOffice viewer
- The future: towards a full-featured document manager

The past

# The story so far

- 2012:
  - GSOC project: “Java GUI for Libre-Office Based Android App”, by Iain Billett
  - Native Android UI wrapping the Android Document loader experiment
    - Browse local documents
    - Filtering
    - Sorting
    - Thumbnails

# The story so far

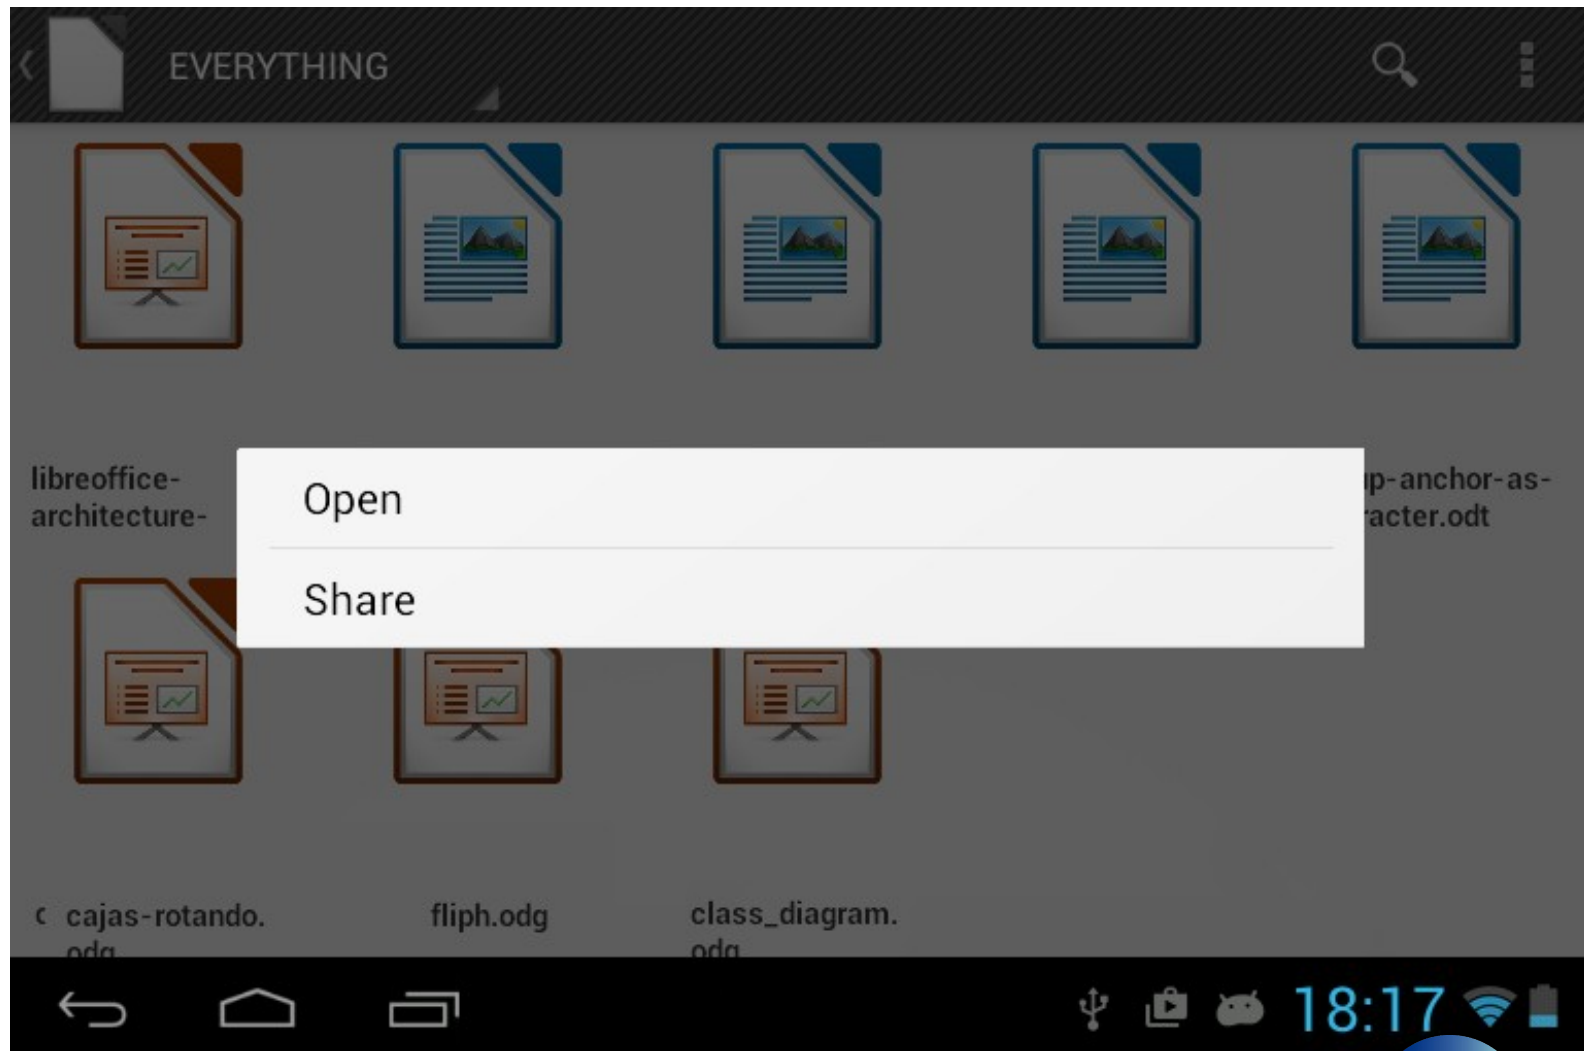

- 2014:
  - The new LibreOffice viewer was started from scratch
  - Adapted and merged the document browser
    - Removed crashing parts
    - Interacts with the new viewer
    - Merged into a single .apk

The present

# Powering up LibreOffice core

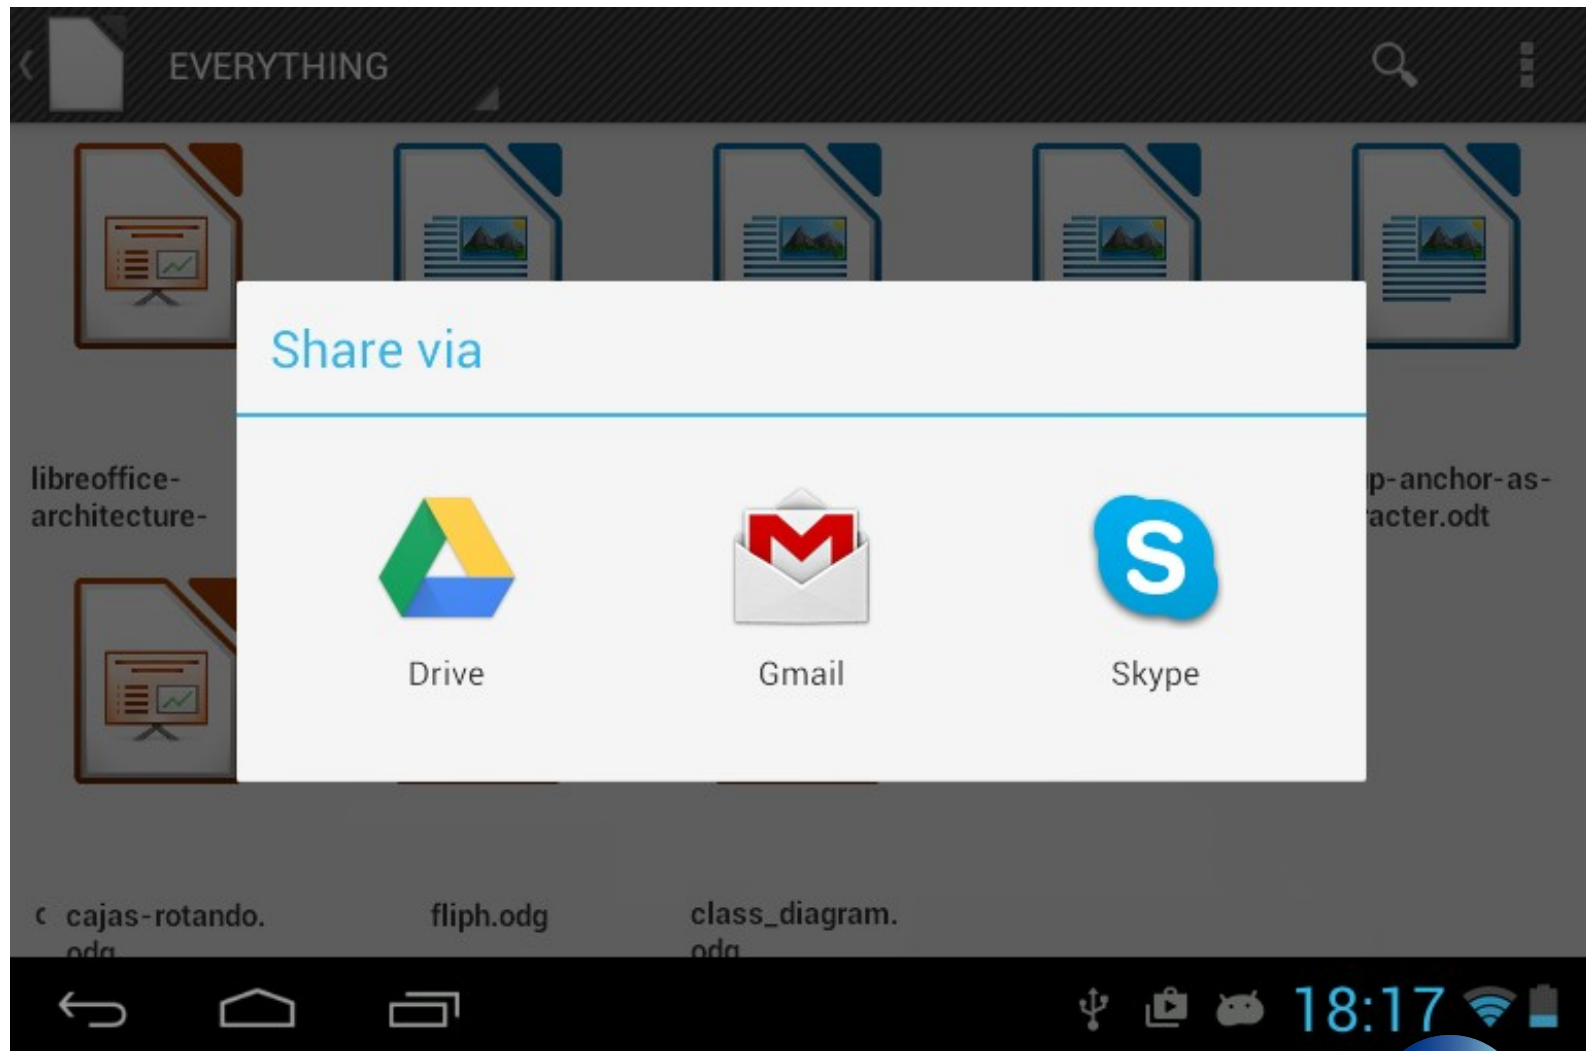

- Provide document browsing
  - No native file browsers in Android
- Integrate LibreOffice native core with Android services
  - Email share
  - Cloud providers
- Sponsoring from The Document Foundation

# Native share

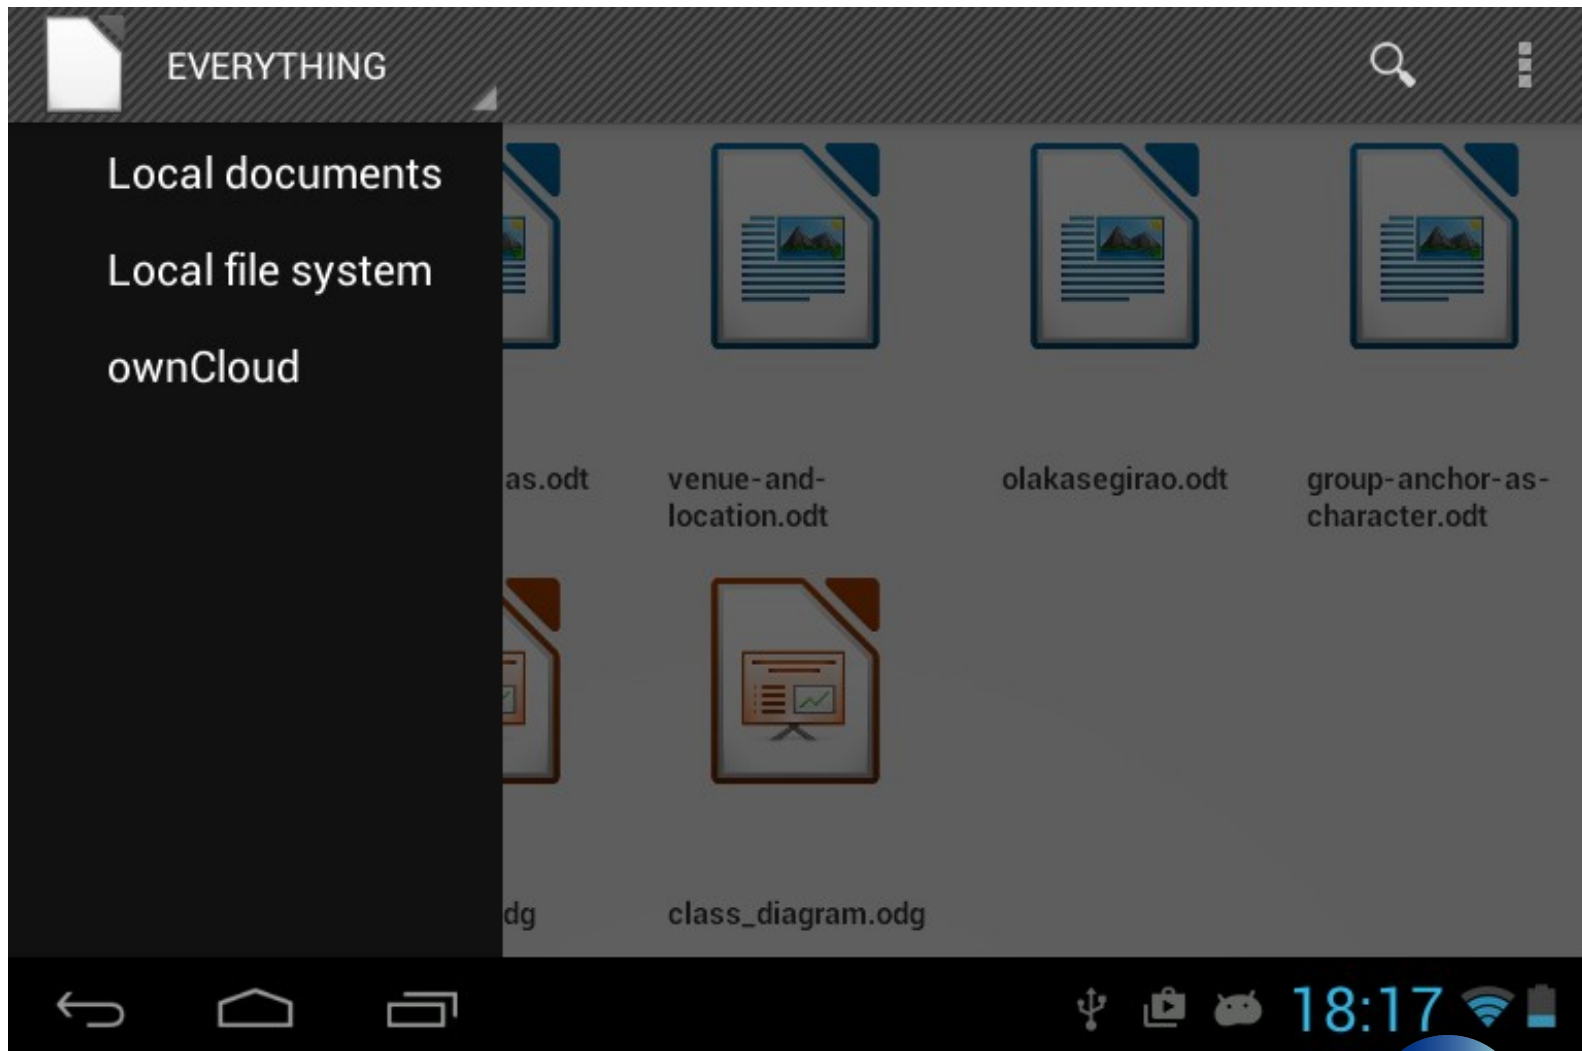

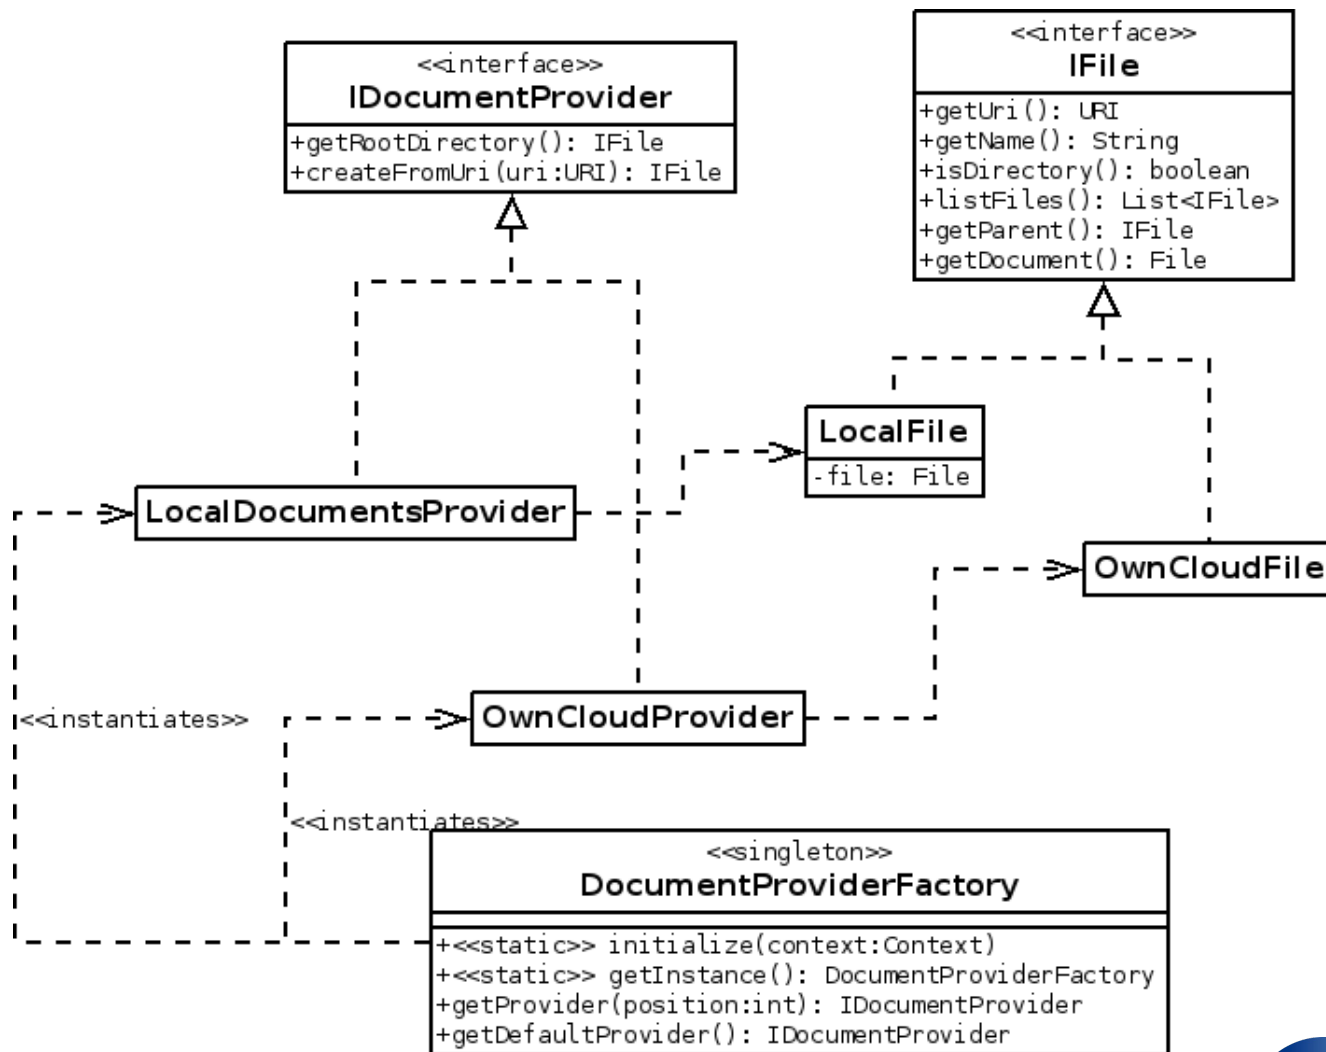

# Native share

# Cloud support

# Cloud support

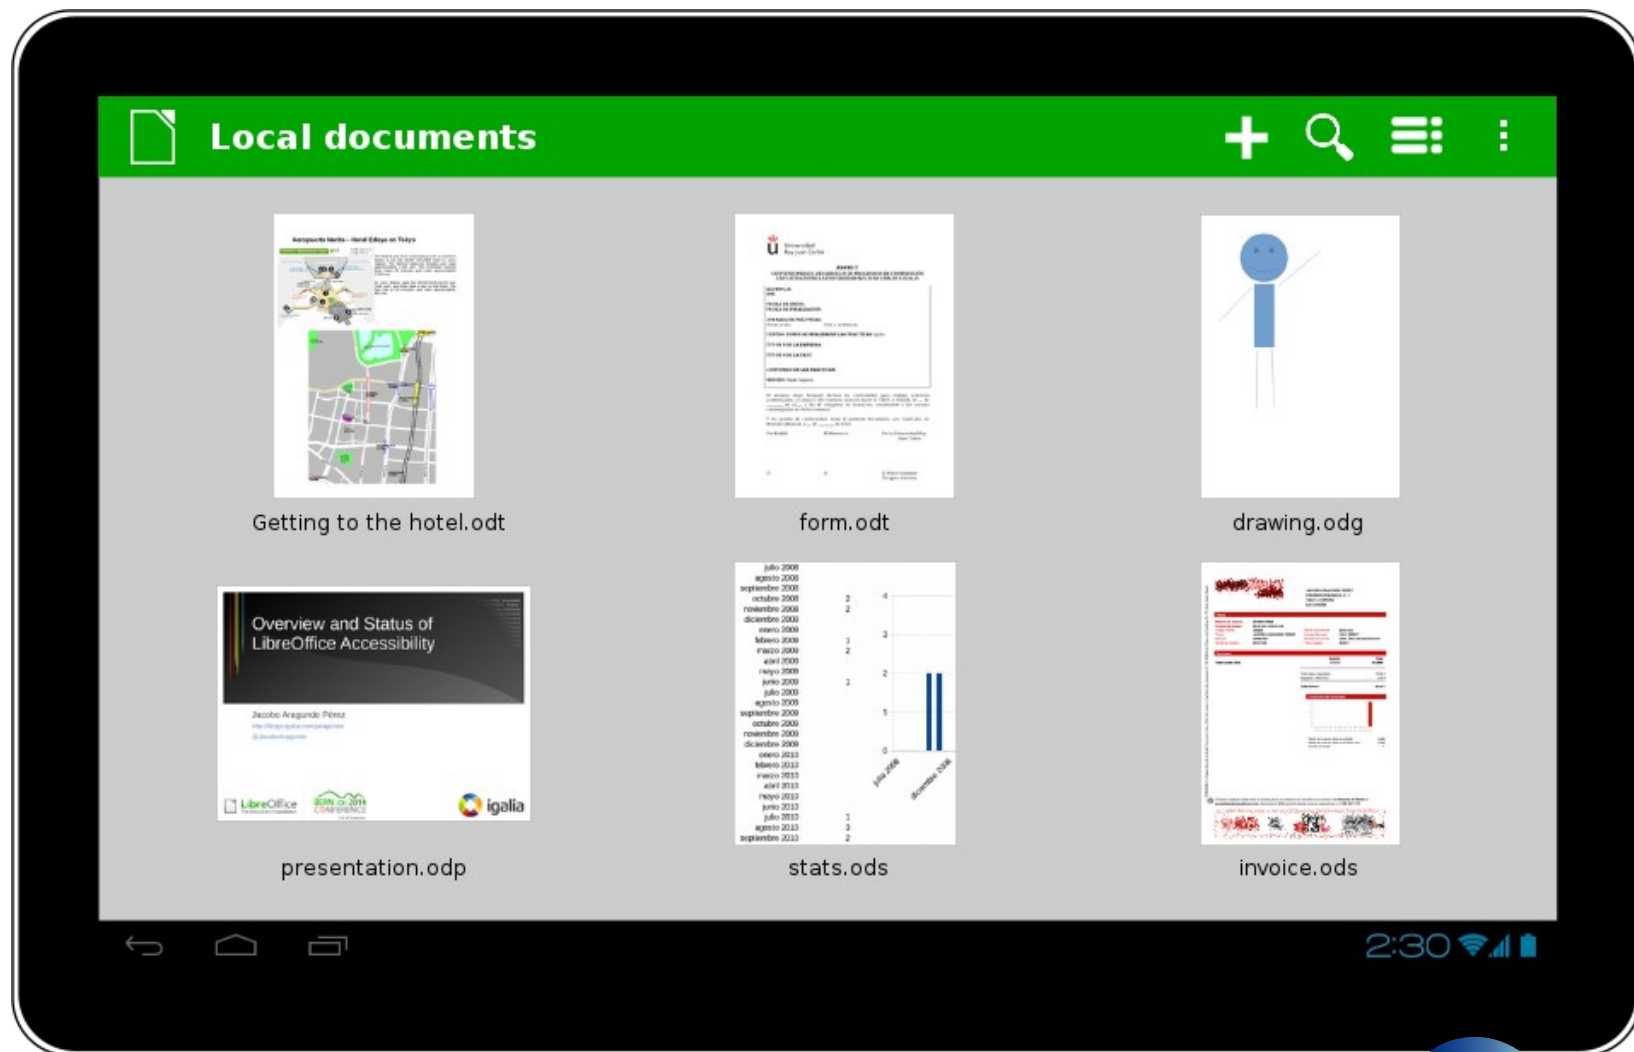

The future

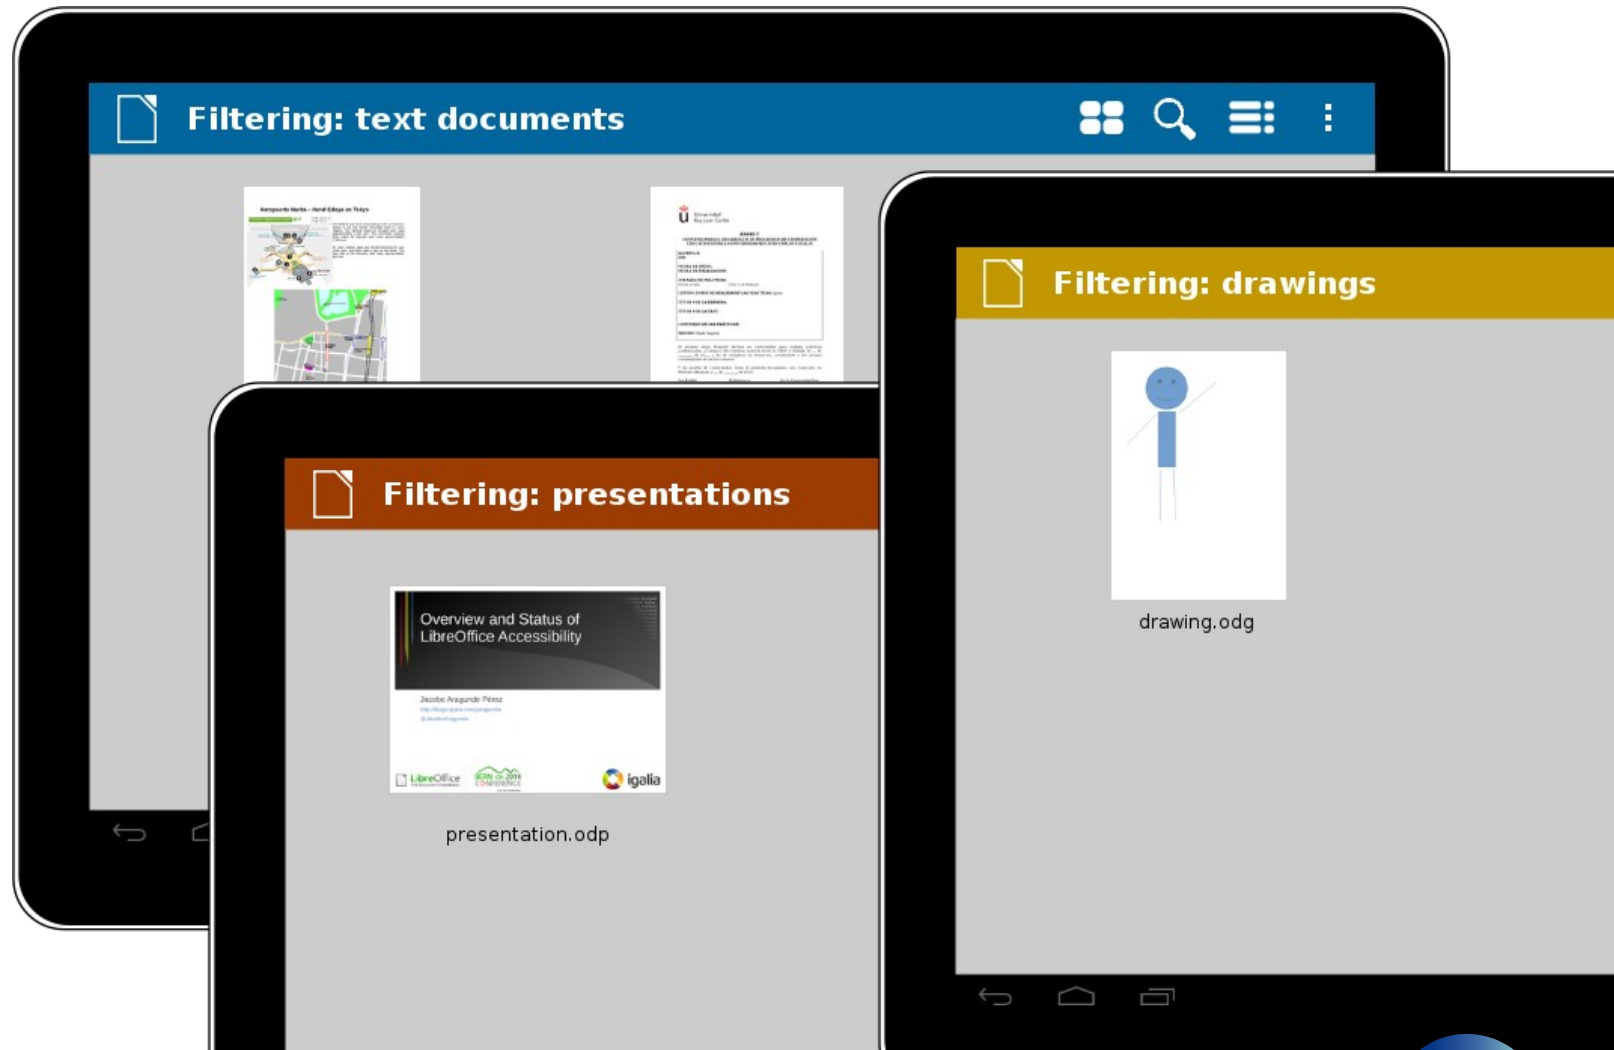

# More features!

- Full featured document management
  - Create/delete
  - Move/copy
  - Rename
- Support for more cloud services
- Fresh design
  - Follow latest Android trends
- Stability and bug fixing, of course!

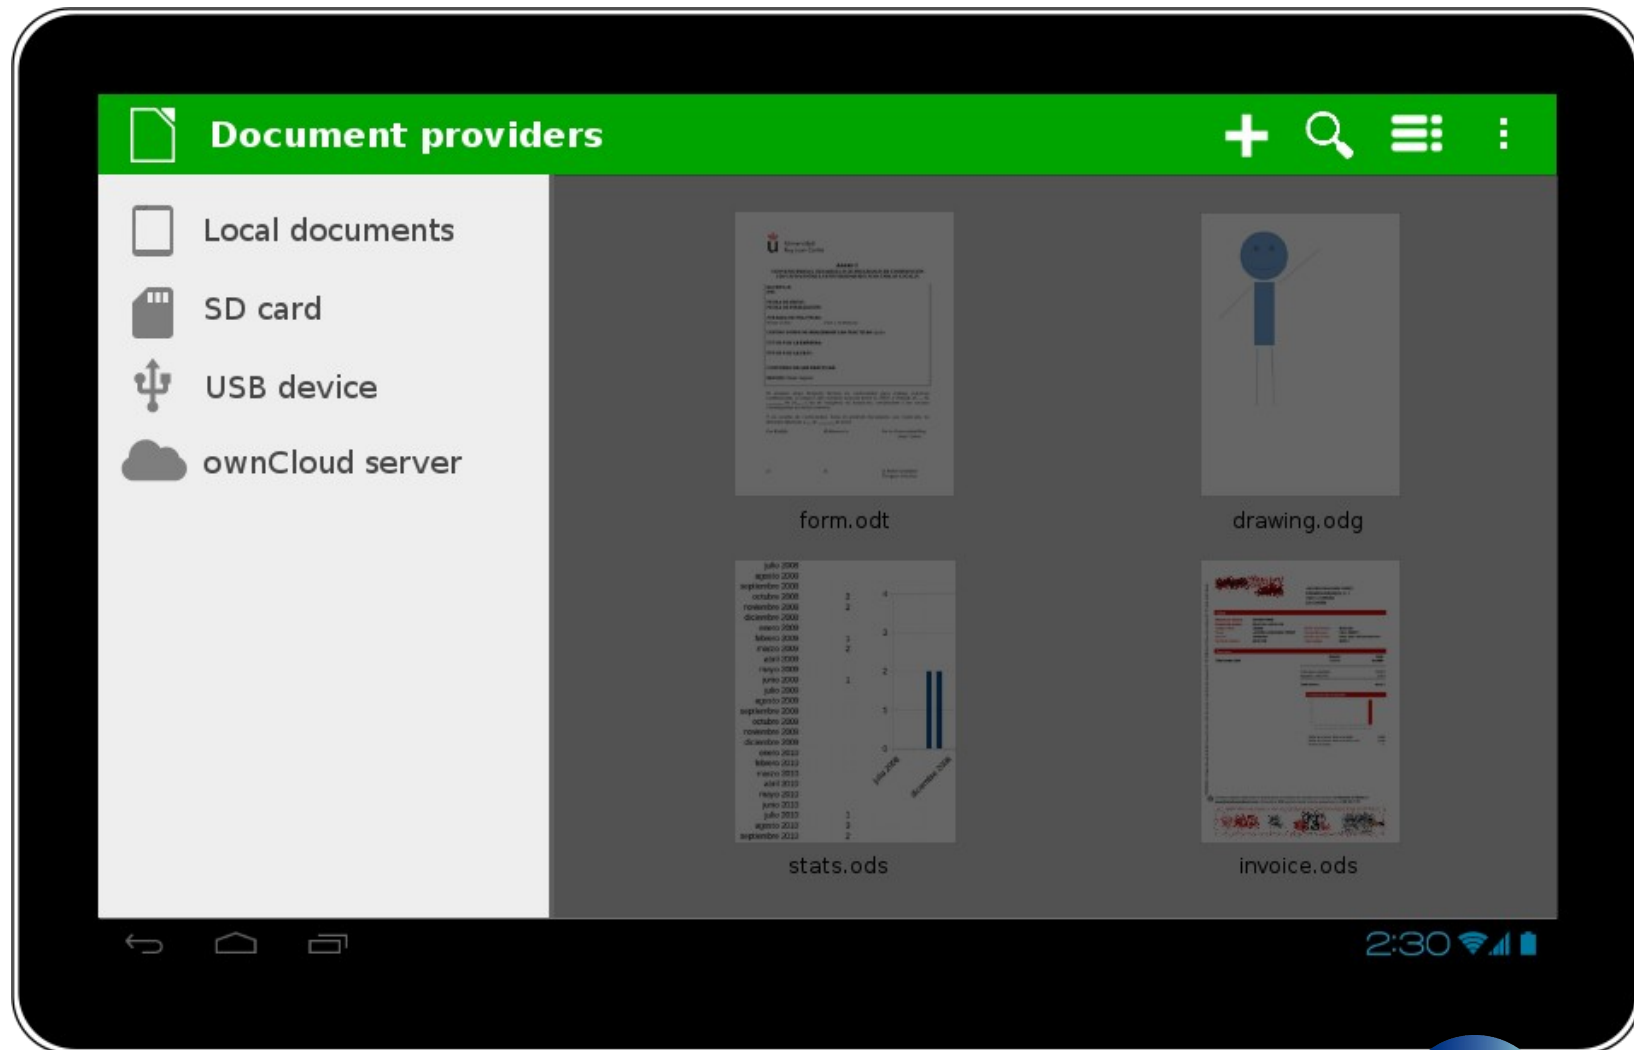

# The document manager

# Filtering options

# Document providers view

**To sum up**

# Summary

- LibreOffice for Android!
- Browse your local documents with no external tools
- Share through email, bluetooth, etc.
- Soon: connect to ownCloud servers
- Later: more cloud services, more document management features, fresh design

# Try it!

- Google Play Store
- F-Droid
- Daily builds at
  - <http://dev-builds.libreoffice.org/daily/master/>

¡Thank you!
